Hydraulic Power Units

design and manufacture

HCS Control Systems design and manufacture simple HPU panels and flushing skids right up to multi-slot hydraulic power and well control units. All systems are designed in-house and meet all industry and client specifications.

The systems can include large walk through IWOCSS units for subsea tree installation, intervention or workover operations. The systems include hydraulic power units and well control panels, emergency shut down (ESD) logic and remote panel requirements.

design, manufacture and supply of hydraulic power units to a multitude of clients within the oil & gas industry

Bespoke Design

In addition, HCS Control Systems can design and manufacture combined HPU and controls cabins, whereby the containerised unit is effectively split into two, one side being a pressurised controls unit and the other the HPU system.

In-House

We can perform all fabrications, assembly of hydraulics

and electrics, system flushing, testing and delivery, and meet most specific footprints, interfaces or other operational considerations.

Specific design, procurement, manufacture and test activities are undertaken on each of the system elements incorporating the electrical, electronic, hydraulic, chemical, pneumatic and mechanical skill sets within HCS Control Systems.
