of the shortest lead times in the industry**

# Umbilical Reelers and Sheaves

design and manufacture

HCS offer a complete selection of reeler drive systems to suit your specific project operational requirements. Whether air-powered, hydraulic powered or even direct electrical powered, HCS can design and deliver with some of the shortest lead times in the industry, typically 14 - 16 weeks from approval of manufacturing drawings.

With our vast library of existing designs, we will often have an existing design that suits your project application, or one that requires minor alteration prior to being submitted for approval.

design and manufacture of umbilical reelers and sheaves, rated to suit hazardous area classification

All HCS Control Systems reelers are designed to either DNV 2.7-1 for those units weighing less than 25 Tonnes or DNV 2.7-3 where weight is greater than 25 Tonnes. Units are CE Marked accordingly to suit Hazardous Area Classification.

**Field-ready:**

HCS Control Systems offer a spooling service where we will install the umbilical onto the reeler and carry out all terminations, delivering the complete field-ready system.
